

## Intermediate Coupling

Our **Intermediate Coupling** comes in a fully-enclosed housing sealed with multiple O-rings. The elongated housing firmly locks the internal stepped shaft in position to eliminate linear movement and minimize wobbling of rigid rod in rotation, thereby extending the life span of internal sealing.

Designed to provide a fixed point of rotation and support the weight of rigid rod, our Intermediate Coupling comes equipped with shaft collar and thrust bearings to provide smooth transmission of torque.

### Options:

- Non-Submersible as Rod Holder
- Fully Submersible as Inter-Tank Sealing
